INDOOR-OUTDOOR CHAIRS

Meridian Architectural Systems

Meridian Architectural Systems has introduced a new line of Indoor/Outdoor Chairs in bright, attractive colours, and funky designs. The Chairs are made from used barrels which are generally used to transport oils/lubricants. In most cases, these barrels are sent off by the buyers for recycling after one use. Meridian decided to acquire and repurpose these barrels and extend their life-cycle by many years, before they are finally sent to the furnace for melting. Parts of the oil barrel are cut away to create monolithic seats with addition

of steel framing supports and legs to raise the seating to comfortable height. In some cases, the cut/removed portion of oil barrels is repositioned in an ergonomic fashion to provide back rest.

The chairs are finished with all-weather paint. These pieces are designed to be used in Sports bars, pubs, automotive showrooms, man-caves and dens. New designs will be added at regular intervals. There are plans to add rocking chairs, storage cabinets, pouffes and centre tables.
